

RAILWAY INCIDENTS

This plan develops the integrated, multi-agency response to an emergency or major incident on the railway in Staffordshire.

It establishes a clear understanding of the roles and responsibilities of rail industry personnel when dealing with an emergency or major incident and identifies the channels of communication between the rail organisations and Category 1 responders and agrees multi agency protocols for dealing with the command and control of a rail emergency.

The plan is accompanied by a glossary of terminology that is agreed and understood by the railway companies and Category 1 responders.
